

COVID-19 Containment and Response Capabilities

In light of global efforts to contain and mitigate the spread of the coronavirus (COVID-19), Moran Environmental Recovery (MER) has assembled its internal response team to effectively manage COVID-19's impact on our employees, our clients, and our business.

MER crews are performing critical cleaning and decontamination services for major utility, rail, government, commercial, and marine clients throughout the East Coast and Midwest. We are a full-service provider that specializes in routinely performing Industrial Cleaning, 24/7 Emergency Response and Hazardous and Infectious Waste Management and Disposal. MER is committed to providing safe, effective solutions for our clients during this time of critical need.

Health & Safety

Much of what we've learned about COVID-19 indicates that it is an infectious disease primarily transmitted through respiratory droplets produced when an infected person coughs or sneezes; as such, OSHA has included COVID-19 in their Bloodborne Pathogens standards as it relates to training and exposure control and prevention of infection. In response to these changes, MER's Health and Safety Team has reviewed and updated our existing Bloodborne Pathogen safety and training programs along with related standard operating procedures and job hazard analyses to ensure that the inclusion of COVID-19 related information and protocols are in accordance with current regulatory standards and guidance made by US regulatory agencies such as the CDC and OSHA. MER has fully trained HAZMAT teams in all of our operational regions and has the required capabilities to respond to suspected or confirmed COVID-19 contamination incidents.

Our Strategy

In the event of a suspected or confirmed COVID-19 contamination incident, MER will follow all client and regulatory reporting protocol and will activate the Moran Emergency Management Team (MEMT) accordingly. MER has the necessary resources and proven experience to perform the work safely and effectively. We recognize the sensitivity around emergency response efforts, and as such, our program includes a communications team that will work collaboratively with the client to assist in effectively managing crisis communications. Our customers and partners can expect a safe, deliberate and well-managed response from MER with support from multiple regulatory agencies.

MER RESPONSE SERVICES AT-A-GLANCE:

Moran Environmental Recovery has extensive experience and expertise with bloodborne pathogens (BBP) and other contagions:

COVID-19 Response Services:

- Planning
- Decontamination
- Disinfecting
- Disposal/Incineration
- Commercial Facility Cleaning

Resources:

- Moran Emergency Management Team (MEMT)
- Hazwoper 40 Trained Responders

Experience:

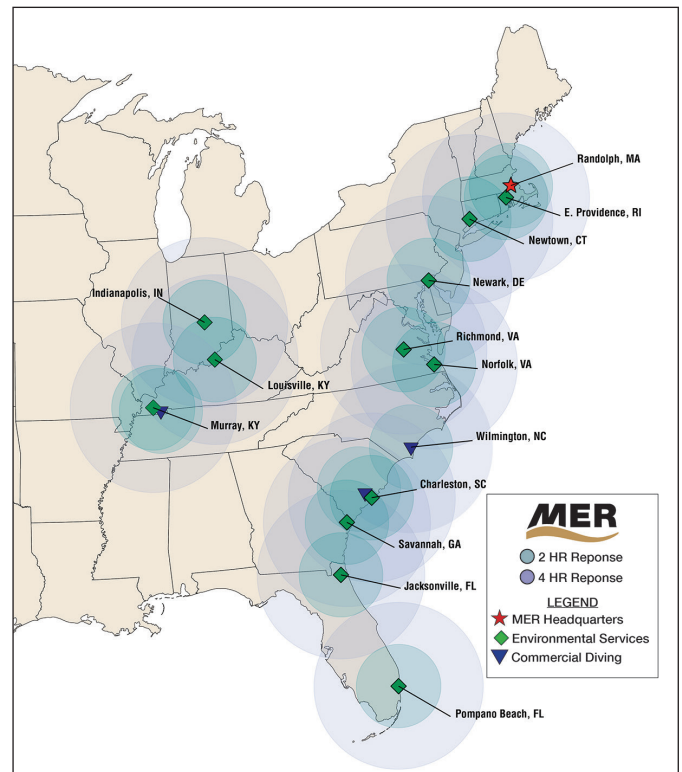

- Anthrax Contagion 2001
- Ebola Outbreak 2014
- Avian Influenza Outbreak 2015
- Ongoing BBP responses within the transit system

Our Philosophy and Experience

MER believes that proper education, preparation, and execution of safe HAZMAT and infectious disease response procedures will help ensure the safety of our employees, the employees of our clients, and the general public. Additionally, our continuous efforts to ensure our program and employees stay current with the rapidly evolving requirements of this issue will enable MER to serve as a prepared and informed resource in the event of a COVID-19 related incident.

MER's best-in-class Emergency Response Program is the result of many years of proactive training and firsthand experience responding to countless emergency events. Our integrated and specialized capabilities position us as the only vendor with this level of experience, depth of in-house resources, technical expertise, and response inventory. Our response services include Routine and Event-based Decontamination, Spill Response (as a nationally recognized Oil Spill Response Organization (OSRO), Airplane Mishaps, Natural Disaster Response and Preparedness and Hazardous and Infectious Waste Management, as well as a variety of additional environmental-related events. Our teams have successfully responded to the Avian Flu outbreak of 2015, the Ebola outbreak of 2014, Anthrax responses in 2001, as well as more than twenty years of performing decontamination and clean-up for the rail industry.

MEMT Program

The MEMT is a dedicated, mobile team of MER employees, each of whom maintains all training and experience necessary to respond efficiently and effectively to the site of any emergency, anytime, anywhere. All members are ICS-300 trained.

MEMT has a strong reputation for providing clients with an Incident Management Team that can integrate seamlessly into their existing response structure. MEMT's mobilization strategy is a planned, practiced, and executed system which provides our clients with a dependable and experienced partner in their response and recovery efforts. For the last twenty years, this team has evolved to function within the Federal Incident Command System structure. This structure provides the client with a team that can work independently in the field with minimal oversight and provides regular updates that are consistent with the set objectives. It also provides a span of control over the total operation that supports field operations and planning for the next day and future operations.
